

Form, Fill & Seal Bale Packaging Machines

Challenger manufacture form, fill and seal machines for the automatic forming, filling and sealing of the plastic bale bags from a reel of film and will accommodate a variety of products including woodshavings, woodchip, copped straw, chopped hay and haylage.

These packaging machines include a register to suit a repeating artwork pattern, a carry handle on smaller bales can be included if required and they can include an optional modem to allow remote fault finding. Integration to collation devices such as spiral wrappers and palletisation robots and they can be linked to other manufacturers balers should the need arise.

A metering feed conveyor system will be required to the baler as a carefully controlled feed of material is essential to the correct functioning of this equipment and other conveying equipment, rotary screens, etc can be manufactured to suit the client's requirements.

These machines are supplied with comprehensive machine guarding, can be painted in any standard RAL colour and will be supplied with an Operation & Maintenance Handbook which includes a troubleshooting guide
